

TRACK LEVEL PLAN

BUILDING SECTION

150 North Riverside

Chicago, Illinois, USA

The 150 North Riverside site is located prominently at the confluence of the three branches of the Chicago River and less than one block away from one of Chicago's busiest commuter train stations. With exposed railroad tracks on the west side of the site and the city requirement for a riverwalk on the east side, the remaining area on which to build was considered impossibly narrow, and the site sat undeveloped for decades. As most of the viable office sites were built over time, the developer decided that an unconventional approach was required for this prime parcel.

Utilizing a unique core-supported structure with a very small footprint at grade, the design resolves the site challenges and provides a 54-story Class A office tower with efficient, 45-foot column-free floor plates. Tenants and visitors enter through a dramatic, 90-foot-high lobby enclosed by a glass-fin wall hung from the structure above. The lobby features a 150-foot-long curated multimedia wall that showcases the work of local and other digital artists across 89 LED blades. The site-specific installation provides a focal point for the space while also addressing the transition between the opaque wall over the parking deck and the start of the glass-fin wall.

On the exterior, vertical mullions take cues from the river and undulate along the building's wide east and west facades to help activate them with an ever-changing pattern of light and shadow. The narrow north and south faces are divided into three vertical planes that accentuate the slenderness of the tower, with the center plane recessed to create additional corner offices. The very condensed lobby and elevator cores allow the majority of the two-acre site—more than 75%—to be a landscaped public park with pedestrian pathways overlooking the river. Building amenity spaces include a restaurant, bar, fitness center and conference center—all with water views.

Certified LEED Gold, the project addresses several sustainable initiatives as it connects and revitalizes a critical downtown parcel, adding a distinctive office tower and active new urban spaces for the city.

Project Data

SIZE

54 stories
1,464,000 sf total
3,300 sf conference center
8,000 sf fitness center
6,700 sf restaurant
2,000 sf bar/restaurant
2,100 sf retail

FEATURES

72 parking spaces
LEED Gold
WELL Platinum
